

# INAUGURAL EVENT:

## THE ROLE OF SCIENCE IN THE NEW WORLD ORDER

### ABOUT

Strategic challenges like accelerating climate change, energy transition, urbanization, adoption of artificial intelligence, and the need for global pandemic warning are all growing in urgency, in complexity, and in their need for clear and direct communication between researchers and decision-makers.

In a time of increasing skepticism on science and growing geopolitical turbulence, the historic Roosevelt House has organized a forum series to convene a multidisciplinary panel of experts to explore how science can better be communicated and translated into sound policy.

## OCT 15TH

9.00 AM - 1.00 PM

THE ROOSEVELT HOUSE

47-49 EAST 65TH  
NEW YORK, NY

### HOW IT WORKS

Each forum will assemble a group of expert scientists, policymakers and practitioners from the public and private sectors. The agenda for each forum will be customized to the topics at hand.

In addition to more broadly-cast keynote talks, the agenda for this first event will feature panel discussions on:

- Climate Change
  - Artificial Intelligence
    - Global Health Challenges

The agenda for each assembly seeks to maximize audience participation, which will include students and members of the public.

A light networking luncheon will take place at the conclusion of the official meeting.

### ORGANIZING COMMITTEE

Charles J. Vörösmarty, William Solecki, Tamás Novák,  
Shriya Palchadhuri
