Badger Docs – Java update 351 problem -

The latest version of Java 8 breaks the 3rd party crypto package we use. The workaround is to remove this troublesome version. Hopefully, a prior version is still on your device. In the past Oracle quickly releases a new version that doesn't break existing apps. In the meantime this will work.

Now Badger will run normally as before, but you want to get rid of the auto update that created the problem to start with.

Removing the Auto Update Selection -

At the start menu

At the start menu (bottom left in windows) run "javaws -viewer".

Close the Java Cache Viewer to get to the console.

			close the viewer
Java Cache Viewer		×	
Show: Applications	× 5 📾 🕻	Installed Size: 0.0	
Application	Vendor	Type Date	

Pick "Update" at the top, then uncheck auto updates and apply.

	Uncheck this.				Apply
		Update	Now	/~	
	OK	Cancel	Арриу		

When this panel shows click "Do Not Check"

Java Update - Warning	>
You have chosen to st updates and will miss	op automatically checking for future security updates.
We strongly recommend lett the most secure and fastest	click Do Not Check versions to ensure you have
	Check Weekly Do Not Check

You should be good to go running Badger now – assuming you have a pre-update 351 version still on board. If not you need to get and install one prior to u351. We will have a doc on that in a bit. If you do install a new copy of Java, be sure to turn off auto updates as above.

Reinstalling Java 8 to a version that isn't broken -

Archive versions of Java 8 may be found here.

https://www.oracle.com/java/technologies/javase/javase8u211-later-archive-downloads.html

Scroll down until you see the version below 8u333. Then pick whichever download makes sense. Once you sign in and agree the file will download. Install normally, but remember to turn off automatic updates as noted above.
